Village of Ruidoso Moves to Increase Utility Efficiency & Performance by Seeking Public Input at Open House

RUIDOSO, NM – March 5, 2016 – The Village of Ruidoso will be hosting a community open house on Wednesday, March 16, 2016, from 4:00 – 6:00 PM at the Ruidoso Convention Center. The purpose of the open house is to seek public comment and suggestions from residents as the Village moves to plan for better utilization of its utility assets and the associated costs that accompany those services.

A critical step in this process is the determination of goals and objectives for service from the water and wastewater systems. These might include such things as reduction in energy usage or water loss and better notification of water outages. It is crucial for utility customers to weigh-in on the level of service they would like to see for these systems including their expectations on how quickly they expect service to be restored when something goes down along with how much they are willing to pay to ensure that timeframe is adhered to.

According to Deputy Village Manager Ron Sena: "Workstations explaining the operation of the water and wastewater systems, asset management planning, and level of service objectives will be available. This will not be a presentation. This will be an open house where the public will be invited to come in and talk to us and let us know what you think and ask us any questions you might have. We want to hear how you think we can improve our utility services to you."

Refreshments will be provided. For more information, visit the Village website at www.Ruidoso-NM.gov or contact Village Hall at 575-258-4343.
